## Research Interests

My research interests lie at the intersection of software engineering and AI, including (1) **integrating static analysis with LLMs to tackle real-world challenges**, such as **flaky test repair** and **SWE issue repair**; (2) **synthetic data generation**, such as evaluating flakiness detection tools and **benchmarking LLMs**. I also study LLM **code reasoning**. My previous research projects have equipped me with skills and experience in *neurosymbolic program analysis*, *genetic algorithms* and *LLM fine-tuning*, as well as software testing including flaky tests detection & repair (accumulating to 139 accepted patches in real-world projects), *mutation testing*, and *test suite minimization*. My ongoing research focuses on building **agentic systems** that integrate software engineering knowledge.

## Education

- 2022-Present **University of Illinois Urbana-Champaign (USA)**.  
Ph.D. Candidate in Computer Science  
Co-advisors: [Darko Marinov](#) and [Reyhaneh Jabbarvand](#)
- 2018–2022 **Huazhong University of Science and Technology (China)**.  
B.Sc. in Computer Science
